PROFESSIONAL SUMMARY

Backend-focused software engineer with end-to-end ownership of production SaaS and hands-on C#/.NET 10 microservices work. Built API gateway and domain-service architectures, secure tenant isolation, Redis-backed caching and coordination, and RabbitMQ background pipelines. Comfortable tracing distributed failures, load testing, reviewing code and mentoring teammates. Bring a production-first approach to order workflows, real-time updates and reliability under traffic spikes.

TECHNICAL EXPERTISE

Backend & APIs: C#, .NET 10 / ASP.NET Core Minimal APIs, Node.js, TypeScript, Express, REST, OpenAPI, microservices, Dapr

Databases & caching: PostgreSQL, SQL, MongoDB / Mongoose, Redis; tenant isolation, indexing, access control

Messaging & realtime: RabbitMQ, event-driven processing, background workers, Socket.IO; Azure Service Bus / SignalR platform exposure

Cloud, quality & ops: AWS production deployments, Azure-hosted .NET development, Docker, Linux, Nginx, PM2, k6, OpenTelemetry, Grafana, Loki, Tempo, Git, CI/CD

PROFESSIONAL EXPERIENCE

ZioNet / iTeach | .NET Software Engineering Intern — 2026

- Shipped C#/.NET 10 Minimal API changes within an Azure-hosted AI learning platform (~10 microservices), following Manager / Engine / Accessor boundaries, OpenAPI contracts and Dapr service invocation.
- Implemented deterministic exercise-duration estimation after AI content generation and progress logic that counts shared learning material once; changes passed code review, were merged and moved to QA.
- Built a PostgreSQL-backed Todo onboarding feature across Manager, Accessor and Engine services, implementing REST endpoints and service-to-service integration.
- Worked within an AKS-hosted, Azure Service Bus / Redis / SignalR ecosystem; ran unit/integration tests and investigated API routing and service behavior through Grafana, Loki and distributed traces, partnering with frontend engineers and QA.

WJS Digital Innovations Ltd. | Full Stack Engineer & Agile Lead — 2024 – 2026

- Designed and operated Together CRM backend: an Express API gateway and 12 domain microservices spanning authentication, clients, leads, tasks, orders, inventory, notifications and administration for 10 live business tenants.
- Implemented MongoDB database-per-company isolation resolved from company slug after JWT/session checks; centralized RBAC/ABAC, permission validation, audit logging, IP allowlists and rate limiting.
- Used Redis for hot-read caching, presence and distributed worker locks; RabbitMQ queues handled bulk SMS/email, imports, report exports and contract PDFs outside the synchronous API path; Socket.IO delivered real-time updates.
- Operated AWS/Linux deployments with Nginx, Docker and PM2 clustering and zero-downtime reloads; evaluated smoke, traffic-spike and sustained-load scenarios using k6 plus latency/error analysis scripts.
- Traced stalled RabbitMQ workers and faulty authorization checks through gateway and worker behavior, helped restore reliable processing, reviewed code with two developers and interviewed 20+ engineering candidates.

SELECTED ENGINEERING PROJECTS

ApproveFlow | *C#/.NET, Dapr, PostgreSQL* - Event-driven invoice/expense approvals with deterministic policy checks, audit trails and human review.

Fly Package | *MERN, REST, geospatial logic | Academic* - Courier dispatch platform with order assignment, delivery-state tracking and nearest-courier selection.

Moments | *Next.js, TypeScript, PostgreSQL, Supabase* - Real-time event galleries with QR uploads, secure storage, row-level access controls and host dashboards.

Notification Service | *TypeScript | Technical assessment* - Hardened bulk messaging with typed validation, retry handling, SMS segment recalculation and safer state transitions.

EDUCATION & LANGUAGES

B.Sc. Software Engineering | ORT Braude College | 2019–2023 | GPA 87/100 | 3× Dean's Honors

Languages: Arabic (native), Hebrew (fluent), English (professional working proficiency)
